

We use only... Organic, Non-toxic, and Eco-friendly products made with fair trade!

At Home Naturally™ is dedicated to providing you with the healthiest, happiest, and most comfortable sleep experience possible while creating a cleaner, healthier world today and into the future. That is why we offer one of the largest selections of healthy, non-toxic, organic mattresses ranging from Organic Cotton, Pure Grow Wool™, and 100% Natural Latex. Our mattresses are of the finest hand-crafted quality and each one is custom made to order, right here in the USA! (Minimizing transportation pollution!)

Signature Features of At Home Naturally's™ All Natural Mattresses and Sleep Systems...

Pure Grow Wool™ was developed as a way of taking responsibility for 3 major components: The purity of the wool; the health of the animals; and the health of our ecosystem. We make sure that the animals are treated in a positive, humane manner and receive the best nutrition and the best living conditions of fresh air, daylight, and clean and roomy shelters. We also practice grazing-management for a positive environmental impact on the land. We honor long-term, positive relationships with U.S. woolgrowers supporting the industry.

Pure Grow Wool™ has many beneficial characteristics...it is a fiber that is springy and resilient and therefore contains an abundance of air. Wool helps to cushion the body and prevent the formation of painful pressure points. It also has the ability to absorb large amounts of moisture vapor without creating a wet, clammy feel. This is an important feature considering the average person produces a pint of perspiration during an 8-hour sleep. Wool is also the best year-round sleep environment since it provides the most comfortable microclimate under different temperature conditions and helps regulate the body temperature. Because wool naturally wicks away moisture, it provides an unfavorable environment for mold, mildew, and dust mites. Additionally, wool is a natural fire inhibitor allowing you to have a mattress that passes all state and federal fire codes without the use of toxic fire retardants or other chemicals.

If all the Cotton in the world were grown organically, the use of insecticides would be reduced by 25 percent. Non-organic cotton grown in industrialized nations is commonly saturated with pesticides and herbicides which are then brought into the factory with that cotton, contaminating the environment where those cotton products are made. These are all important factors to be considered as we vote with our choices and our dollars, and in so doing, create a demand for a safer environment for all.

Organic Cotton is the most universally comfortable, versatile and durable of fibers. Its properties and breath-ability make it an excellent choice for all climates, especially hot climates. Since cotton can absorb about 1/5th of its weight without feeling damp, it provides a comfortable sleep in humid conditions too. We use only the finest organic cotton in our mattresses as well as in our other accessories such as pillows, comforters, mattress toppers, mist covers, shams, protector covers for pillows, and more. We also offer a whole line of All Natural Baby Bedding made with Organic Cotton, Pure Grow Wool™ and 100% Natural Latex. Our products allow you to sleep and breathe in the most natural and healthiest environment.

Only the finest 100% Natural Latex is used for the support core at the center of our latex mattresses. Natural latex is an ideal choice when your primary goal is comfort. Latex is flexible yet stable so you experience less transfer of motion when your partner moves. The Natural Latex mattress is known for maintaining independent support even when two people of different body weight are sleeping on the same mattress. Also, a latex mattress is ideal for those concerned with EMF's (Electromagnetic Fields) as our 100% Natural Latex mattresses contain no metal. 100% Natural Latex is naturally hypo-allergenic making it the first choice for those who have allergy sensitivities.

About our Natural Latex

Latex is harvested by tapping the milk (sap) from the Hevea brasiliensis (the common rubber tree). It is known that the Hevea milk contains an antibacterial substance that is a natural dust-mite repellent.

An injection system produces the purest natural product for mattress cores that will keep their shape. At Home Naturally™ does not use sodium silicofluoride (SSF, aka sodium fluosilicate) in our mattresses.

100% Natural Latex is an excellent environmental choice as well! Rubber plantations help combat greenhouse gasses and our natural latex breaks down into a biodegradable substance.

Synthetic Latex/Memory Foam vs. 100% Natural Latex

Synthetic latex is made from a man-made chemical called plastic which is the material featured in popular brand name memory foam mattresses. While sleeping on a memory foam mattress your body creates an impression, which stays, like a memory, in the mattress, often not immediately returning to its shape. Because memory foam is synthetic and does not breathe, it can cause the body to sweat, commonly causing an unpleasant chemical odor reaction from the synthetic mattress.

A 100% Natural Latex mattress allows the best breathe-ability because it contains no man-made chemicals. It is made from a rubber-based product providing "instantaneous recovery" contouring and supporting your body movement. Natural latex is known for providing comfort while relieving pressure points.

We spend a third of our lives sleeping so this is a crucial time for your immune system to rebuild and heal from environmental and daily stress... Avoiding toxic chemicals in your mattress that might be inhaled during sleep is of the utmost importance to your health. Wouldn't you prefer a 100% natural, chemical free mattress, free of all toxins, pesticides, chemical fertilizers, and dyes for your healthy night's sleep? Your At Home Naturally™ sleep system is the best investment you can make for your health and well-being, and that of Mother Earth's.

Allergy Sensitivities

Our 100% Natural Latex is hypo-allergenic and dust mite resistant without the use of harmful chemicals. Dust mite waste is a primary agent in both the development and "trigger" of asthma, year-round hay fever and chronic sinusitis. The allergies that you sometimes hear of regarding latex do not relate to the "natural", "non-synthetic" latex used in our mattresses, it refers to latex "film" used in making such products as medical gloves.

If you have a history of allergies and are at all concerned, you may request a sample of our 100% Natural Latex, Organic Cotton, or Pure Grow Wool™ material, and sleep on the sample for a night or two, or simply order one of our pillows prior to ordering your mattress.

EMF's

Electromagnetic Fields are low-energy radiation that comes from the interaction of electric and magnetic fields. Sources include power lines, electric appliances, radio waves, microwaves, and others. Electromagnetic Fields are also called electromagnetic radiation. Because latex mattresses have no innersprings or metal, they are not conductors of EMF's

At Home Naturally™ Cares About You and Mother Earth!

Sleep time is when your immune system rebuilds and replenishes itself; therefore it is of the utmost importance for your sleep surroundings to be the healthiest possible environment. Most commercial mattresses are made with petroleum-based foam and then soaked in fire retardant chemicals. For years, these mattresses outgas a known carcinogen called formaldehyde, which means your pores and lungs are absorbing this toxic substance while you're sleeping.

Fire retardants are made up of PBDE's, which are chemicals that build up in our bodies like the banned PCB's. These chemicals have been associated with neurological damage, cancer, and SIDS. PBDE fire retardants are banned in Europe. Some states in the U.S. are just beginning to pass legislation to ban PBDE's as well. Organic mattresses do not contain any toxic substances or chemicals; this is much healthier for the workers, the work place, the landfills, and the water table!

At Home Naturally™ mattresses and bedding are proudly made here in the USA in a factory that is kept spotless. We do not allow manmade chemicals, synthetic materials, perfumes, pets or smoking in the facility. Our mattresses are made to order and shipped to you directly from the factory. Because your mattress is made in a facility that doesn't have any synthetic materials you can be assured you are getting the purest quality possible, this has been especially important for our customers who are chemically sensitive. We take great pride in knowing that we are offering the finest and healthiest bedding on the market today.

You owe it to yourself to experience the best and healthiest night's rest. Sleep time constitutes approximately one-third of your life; and a happy, healthy, productive day depends on it! What would you choose for yourself and your loved ones to sleep on?

Welcome!

Please make yourself...
